Rainbeau Ridge Farm

49 David's Way

Bedford Hills, NY 10507

The most commonly used herbicide, glyphosate (Roundup) is wiping out the Monarch butterfly.

Rusty-Patch Bumble Bee and other native bees and pollinators are in decline due to habitat loss, pesticide use, and climate change.

Beekeepers are experiencing losses of their European honeybee colonies in part by the use of systemic pesticides, especially Neonicotinoids (Neo-nics) which are lethal to bees and other pollinators.

Learn about the implications for human health, too, and what you can do to help!
